**The OTTC Ammonia Diploma's and OTTC Qualifications are OTTC's own Programs  
with Copy Right.**

**The most important is the safety of people as ammonia is known to be dangerous.**

**We say ammonia is the safest and oldest refrigerant.**

**When you have the smallest leak you can smell it and know you must fix it.**

**And how to fix it we can show you how and we will also advise you how to protect yourself.**

**If an ammonia plant has his regularly maintenance plan in place and the company  
keep doing it properly,**

**this plants can run for 40 years and longer.**
